# Limitless possibilities

#### Description

Viridian **PixaGraphic™** is a range of decorative glass, manufactured using ceramic coated paint which is printed directly onto the glass. **PixaGraphic™** transforms glass into a creative medium without limitation- printing all kinds of custom designs and artworks in brilliant colour and high resolution detail.

Turn a striking photograph into a stunning signature facade, an illustrative motif into a unique interior finish, or corporate branding into dynamic placemaking graphics.

If you can picture it, PixaGraphic™ can help you achieve it.

#### Considerations

**PixaGraphic™** must be heat treated before use. The natural green tone of standard glass can affect some design and can be minimised by specifying Viridian **SuperClear™** low iron glass.

**PixaGraphic™** can be used for exterior and interior applications. The coated surface must be glazed to the inside of the building.

#### Features and benefits

- ◆ Resolution of the printed image can range from a standard quality of 360 dpi to a high quality print at a phenomenal 1440 dpi.
- ◆ **PixaGraphic™** manufacturing process combines hardwearing, ceramic inks, with the very latest in direct-on-glass digital printing technology. The inks fuse to the surface of the glass during toughening, creating a durable finish
- ◆ Adjust the ink coverage to achieve the required level of light transmission & opacity
- ◆ Viridian covers every panels produced with a 10 years warranty
- ◆ **PixaGraphic™** is a Grade A safety glass (AS/NZS2208) once toughened.
