DécorSatin™

Frosted etched glass

DécorSatin™ frosted etched glass strikes the perfect balance between allowing natural light in and making your room a sanctuary with its translucent satin finish.

DécorSatin™ is a float glass, where one side has been treated with an acid etch to produce a satin finish.

This process is applied to the entire sheet of glass post manufacture, to ensure an overall consistent finish. The finish is both moisture and UV resistant, making it ideal for exterior and interior applications.

Features and Benefits

- High light transmission of up to 87.5% but diffuses to give a natural feel.
- The finish is both moisture and UV resistant meaning it is less susceptible to staining and is ideal for interior and exterior applications.
- When toughened, DécorSatin™ is a Grade A safety glass.

Considerations

Installation

- The acid etched surface must be glazed to the inside of the building.
- Acid etched surface needs to be installed facing away from moisture exposed areas.

Sectors

- Residential
- Commercial

Applications

- Windows
- Doors
- Bathrooms
- Partitions
- Wall Panels
- Lead Lighting
- Louvres
- Furniture
- Splashbacks with Seraphic™

How to Specify

- **Select glass processor**
Viridian Glass
- **Select glass name**
DécorSatin™
- **Select tone & thickness**
See chart below.
- **Select processes**
Toughened, laminated and insulated glass unit.
